TOP

#1 in Applicants Today

SDET and automation engineer with nearly a decade of experience delivering automated quality, performance, and AI-powered solutions across the full SDLC. Evolved from a hands-on developer into test automation, performance engineering, and enterprise AI/LLM systems.

SKILLS

AI & Automation

- LLMs (GPT, Claude, Gemini)
- RAG, Prompt Eng, Agentic AI / MCP
- Selenium, Cucumber (BDD)
- REST Assured, Postman
- AI-Assisted Testing, Copilot

Engineering & DevOps

- Java, Python, JS / TypeScript
- Performance Engineering
- CI/CD: Docker, Jenkins, GH Actions
- Observability: Grafana, Prometheus
- Gradle, JFrog, Kubernetes

Hitachi Vantara Ltd.

Sept 2020 - Present

SDET - AI & Automation

Bengaluru, India

- Design and deliver custom, AI-powered data identification solutions that automatically tag sensitive customer data with PII classifications using LLMs integrated with Pentaho Data Catalog (PDC) - achieving ~80% detection accuracy vs PDC's standard non-LLM solution.
- Build agentic AI workflows leveraging RAG and prompt engineering to detect, classify, and govern PII across large, heterogeneous enterprise datasets.
- Integrate Model Context Protocol (MCP) to connect LLMs with internal product tooling for reusable, context-aware AI services.
- Architect and maintain end-to-end test automation frameworks - REST Assured and Postman for APIs, Selenium and Cucumber BDD for GUI - to maximize coverage and minimize regression risk.
- Accelerate test creation with AI-assisted testing and GitHub Copilot, reducing manual scripting and review cycles.
- Drive performance engineering by profiling throughput, latency, and resource utilization and tuning systems to meet enterprise scalability targets.
- Implement an observability stack with Grafana, Prometheus, OpenObserve, Loki, and OpenTelemetry, and build/maintain CI/CD pipelines with Gradle, GitHub Actions, JFrog, Docker, and Jenkins.
- Operate within the Production Engineering team to triage and resolve customer-reported issues each sprint in an Agile environment.

Decathlon Sports India

July 2019 - Sept 2020

IT Technical Leader

Bengaluru, India

- Implemented a data-archival solution using Shell and PL/SQL that reduced AWS server costs by ~50%, improved performance, and resolved longstanding issues.
- Led the technical team in upgrading Openbravo billing software and PostgreSQL across all POS systems in India, delivering new features and improved stability.
- Developed and integrated an API-based card-payment device using REST APIs, JavaScript, Java, and PL/SQL, reducing billing time and improving customer satisfaction.
- Migrated the code repository from Mercurial to GitHub, strengthening security and release management.
- Resolved real-time production incidents, improved code quality, and delivered strong customer support.

Tech Mahindra Limited

Sept 2016 - June 2019

Application Developer

Bengaluru, India

- Developed web applications using Java, JSP, PL/SQL, JavaScript, HTML, and CSS to surface database statistics to end users.
- Designed and delivered custom client solutions using Java, JavaScript, and PL/SQL based on business requirements.
- Enhanced a custom ETL tool with new features, defect fixes, and UI improvements that boosted performance.
- Developed scheduled jobs (cron) for various business needs, reducing manual effort and improving efficiency.
- Authored high-quality JUnit tests and automation scripts for unit testing.

EDUCATION

B.E., Electronics & Communications Engineering

New Horizon College of Engineering, Bengaluru

2012 - 2016

ACHIEVEMENTS

- "Pat on the Back" Award - Tech Mahindra (2017 & 2018)
- Certificate of Appreciation - Decathlon (2020)
- Recognized at Hitachi Vantara for AI solutions on Pentaho Data Catalog
