

RAJATH GOWDA

Software Development Engineer in Test (SDET) | AI, Test Automation & Performance Engineering

Bengaluru, India • +91 8123200196 • rajathg64@gmail.com

PROFESSIONAL SUMMARY

SDET and automation engineer with nearly a decade of experience architecting and delivering automated quality, performance, and data-engineering solutions across the full software development lifecycle. Began as a hands-on application developer building Java, PL/SQL, and web solutions before advancing into test automation and performance engineering. Currently apply AI to enterprise products—building custom, LLM-powered solutions on Pentaho Data Catalog, including automated PII detection and data classification. Bring deep expertise in test automation, performance engineering, CI/CD, observability, and Agentic AI workflows (RAG, prompt engineering, MCP), and am consistently recognized for strong delivery and contributions to team success.

TECHNICAL SKILLS

AI & ML: LLMs (GPT, Claude, Gemini), Retrieval-Augmented Generation (RAG), Prompt Engineering, AI Agents & Agentic Workflows, Model Context Protocol (MCP), AI-Assisted Testing, GitHub Copilot

Test Automation: Selenium, Cucumber (BDD/Gherkin), REST Assured, Postman, JUnit, RPA, API & UI Automation, Test Framework Design

Performance Engineering: Performance & Load Testing, Latency & Throughput Profiling, Application Tuning, Observability-Driven Optimization, Production Engineering

Languages: Java, Python, JavaScript, TypeScript, Kotlin, PL/SQL, Shell

CI/CD & DevOps: GitHub Actions, Jenkins, Gradle, Maven, Apache Ant, Docker, Kubernetes, JFrog, Traefik

Observability: Grafana, Prometheus, OpenTelemetry, Loki, OpenObserve

Data & Databases: Pentaho Data Catalog, MongoDB, Oracle, PostgreSQL, MySQL, MS SQL, Snowflake, Pentaho, JDBC

Frameworks & Web: Spring, Angular, REST APIs, Web Services, HTML, CSS

Tools & Platforms: Git/GitHub, JIRA, IntelliJ, Visual Studio, PractiTest, Dynamics 365, Putty

Methodologies: Agile/Scrum, Performance Engineering, Production Engineering, Data Governance, Test-Driven Development

PROFESSIONAL EXPERIENCE

Hitachi Vantara Ltd. — Software Development Engineer in Test (SDET) – AI & Automation Sept 2020 – Present
Bengaluru, India • IO Tahoe LLC merged into Hitachi Vantara Ltd.

- Design and deliver custom, **AI-powered data identification solutions** for enterprise customers that automatically tag sensitive customer data with PII classifications using **LLMs** integrated with the **Pentaho Data Catalog (PDC)** product—achieving **~80% detection accuracy** relative to PDC's standard (non-LLM) solution.
- Build **agentic AI workflows** leveraging RAG and prompt engineering to detect, classify, and govern PII across large, heterogeneous enterprise datasets.
- Integrate **Model Context Protocol (MCP)** to connect LLMs with internal product tooling, enabling context-aware AI use cases and reusable AI services.
- Architect and maintain **end-to-end test automation frameworks**—automating REST API testing with REST Assured and Postman and authoring BDD suites with Selenium and Cucumber for GUI automation—to maximize coverage and minimize regression risk.
- Accelerate test creation and improve coverage with **AI-assisted testing and GitHub Copilot**, reducing manual scripting effort and review cycles.
- Drive **performance engineering** by profiling application throughput, latency, and resource utilization and tuning systems to meet enterprise scalability and reliability targets.
- Implement a robust observability stack with Grafana, Prometheus, OpenObserve, Loki, and OpenTelemetry to monitor live application data, logs, metrics, and system performance, enabling proactive issue detection and resolution.
- Build and maintain CI/CD pipelines with Gradle, GitHub Actions, JFrog, Docker, and Jenkins to enforce code quality and systematic testing for smooth product deployments.
- Operate within the Production Engineering team to triage and resolve customer-reported issues, delivering high-quality fixes on a sprint basis in an Agile environment.

Decathlon Sports India — IT Technical Leader

July 2019 – Sept 2020

Bengaluru, India

- Implemented a data-archival solution using Shell and PL/SQL scripts that reduced AWS server costs by ~50%, improved system performance, and resolved several longstanding issues.
- Led the technical team in upgrading the Openbravo billing software and PostgreSQL across all POS systems in India, delivering new features and improved system stability.
- Developed and integrated an API-based card-payment device using REST APIs, JavaScript, Java, and PL/SQL, reducing billing time and improving customer satisfaction.
- Migrated the code repository from Mercurial to GitHub, strengthening security and enabling better release management.
- Resolved real-time production incidents, improved code quality, and delivered exceptional customer support.

Tech Mahindra Limited — Application Developer

Sept 2016 – June 2019

Bengaluru, India

- Developed web applications using Java, JSP, PL/SQL, JavaScript, HTML, and CSS to surface database statistics to end users.
- Designed and delivered custom client solutions using Java, JavaScript, and PL/SQL based on business requirements.
- Enhanced a custom ETL tool with new features, defect fixes, and UI improvements that boosted overall performance.
- Developed scheduled jobs (cron) for various business needs, reducing manual effort and improving efficiency.
- Authored high-quality JUnit tests and automation scripts for unit testing.

EDUCATION

B.E., Electronics & Communications Engineering

Aug 2012 – June 2016

New Horizon College of Engineering, Bengaluru

ACHIEVEMENTS

- “Pat on the Back” Award – Tech Mahindra Ltd. (Dec 2017 & Dec 2018)
- “Certificate of Appreciation” – Decathlon Sports India (Jun 2020)
- Consistently recognized at Hitachi Vantara for delivering customer-facing AI solutions on Pentaho Data Catalog.
